RECIPE FOR BETTER LIVING . . .

THE YEAR 1950 will see many gardeners growing their own vegetables. They have found that while it is convenient to go to the store for the vegetables they use, so much of the quality and taste is lost every day they are picked that they would rather grow their own, and have fresh, tasty vegetables right out of their own gardens whenever they want them.

The many newer varieties that have been greatly improved over the old ones, give increased returns in yield and quality, therefore more enjoyment in growing your own.

The varieties listed by us have been proved by experience to be the best for this section. We have tried to eliminate the ones that will not be entirely satisfactory.

Vegetable and Flower seeds are in good supply, with the exception of a few varieties, but Grasses remain pretty strong, due to the shortage of Blue Grass the last two years. We specialize in good Grass seeds and have contracted our usual supply of the better grades, so we are in a position to take care of your needs in good Grass seeds.

You will find several new Roses listed on pages 34 and 35, Roses that have been proved to be suitable for this locality, and real fine additions for your Rose garden.

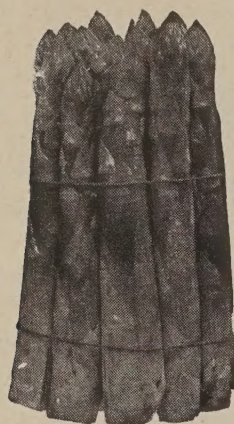

Send us your orders early so we can give you prompt service—later in the spring we are so rushed that some orders are delayed for a few days and we want to serve you promptly.

CABBAGE

Three ounces of seed to 100 yards of row. One ounce will produce 2000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and 2 feet apart between rows. Late Cabbage 2 feet apart in rows and 3 feet between rows. Cultural leaflet on request.

Golden Acre The earliest of the Danish varieties, being 10 days ahead of Copenhagen Market. The heads are medium size; very firm. Valuable for early market. **Pkt. 10c; oz. 40c; ¼ lb. \$1.20; lb. \$3.50.**

100 feet of drill.

Furrows for Carrots should be 14 inches apart and from a half-inch to an inch deep. The seed can be sown from mid-April to mid-May; it should be sown rather close, as Carrots do not germinate very well. Thin the plants out to 4 inches apart when they are 4 inches high. Soil for Carrots should be particularly well tilled before they are planted.

Early Snowball

CAULIFLOWER

One ounce will sow a bed 40 square feet and produce about 2000 plants.

All our Cauliflower seed is growers' first quality sifted, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors even a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May. Treat the seed with Semesan.

Early Snowball American grown. "Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties, 18 to 20 inches being far enough apart. **Pkt. 15c; ¼ oz. 75c; oz. \$2.25.**

CELERY

Three ounces of seed to 100 yards of row.
One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about 4 inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Celery is planted in rows that should be at least 3 feet apart. About 15,000 plants to the acre.

GOLDEN SELF-BLANCHING. American grown. Tall. The choicest sort of delicious Celery; with broad, heavy stalks, which blanch into a rich, appetizing golden yellow, making this the most popular golden Celery on the market. **Pkt. 10c; ¼ oz. 30c; oz. 90c; ¼ lb. \$2.75.**

Giant Pascal Standard market sort for winter use. **Pkt. 10c; ¼ oz. 25c; oz. 75c; ¼ lb. \$2.25.**

CHIVES - Schnittlauch

A member of the Onion family. Hardy. The seed grows readily. A packet makes a suitable home supply. **Pkt. 10c; ¼ oz. 30c; oz. 90c.**

CHICORY

WITLOOF—Brussels. True French Endive and very best variety. **Pkt. 10c; oz. 50c; ¼ lb. \$1.50.**

Pascal Celery

Golden Bantam

Stowell's Evergreen

CORN, SWEET

One pound will plant 100 hills; 10 pounds an acre.

Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be 3 feet apart, the kernels sown three together every 6 inches in the furrow. When the Corn is well started, pull out all but one stalk to each place. Keep the little shoots or suckers cut from around the roots. The ears are ready to pick when the silk is brown and the kernels on the top are plump.

Prices for each of the following six varieties:

Pkt. 10c; ¼ lb. 15c; ½ lb. 25c; 1b. 40c; 2-lb. pkg. 75c; 5 lbs. \$1.60.

Early Golden Bantam "Dependable Grade." Select strain of exquisite quality; when ready to use is of a bright golden yellow color. It can be planted very early; is hardy. The small stalks grow very closely together in the row and will produce 2 to 3 ears each. We especially recommend it on account of its ability to stand the cold weather of spring.

Giant Golden Bantam Improved Is a 12-rowed variety of very sweet Corn. A little later than 8-rowed. Good producer.

EARLY EVERGREEN. Similar to Stowell's, though medium early. 14- to 16-rowed. Good quality.

BLACK MEXICAN. Small ears; very sweet. Suitable for home use.

Country Gentleman Shoe-peg kernels. Medium large, good canning variety. Sweetest of all. Average 90-day.

HYBRID VARIETIES SWEET CORN

The result of hybridizing gives us seed that produces very early, deliciously sweet and remarkably uniform ears—just what every home gardener wants. Make two or three plantings, 10 to 14 days apart, then you have Corn through a prolonged period, fresh from your garden to the table.

LETTUCE All Select

One ounce for 200 feet of row. One ounce of Head Varieties will plant 400 feet of row. Two pounds per acre.

Lettuce will stand slight frosts, and is therefore one of the first things to plant; if the ground is well prepared, early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin to 4 or 5 inches. The heads are usually well formed in 10 weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of Lettuce should be at least a foot apart. The quality of the Lettuce depends on the tilling—keep the hoe busy.

*These varieties form heads.

*Great Lakes

This variety is called a head Lettuce, though not as large as the western varieties of Wonderful or Imperial. However, it has been proven as an excellent small head variety doing well in hot weather. We do believe it suitable for our home gardens. Received All-America Prize in 1943. Pkt. 10c; ¼ oz. 15c; oz. 45c; ¼ lb. \$1.30; lb. \$4.25.

Peas can be planted as soon as the frost is out of the ground; the rows should be 2½ feet apart. Plant the climbing varieties near a fence and train them on wire netting. Our seed all Western grown.

TOMATOES *Delicious*

One ounce will produce 1500 plants; ¼ pound to transplant for one acre.

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a 3-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within 3 feet of any other crop. Dig holes 3 feet apart and deep enough to allow placing the plant an inch or two deeper than it was in the pot. Cover the top of the pot with your fingers, holding the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing the earth around it; if the earth is dry, water it as soon as the plants are set. Some people put a ring of heavy paper around the plant, at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent disease.

WILT-RESISTANT VARIETIES

ASTERS

Annual. The queen of the summer-blooming plants. Varieties listed represent the finest Asters of the early (1), midseason (2), and late (3) type. Require a rich soil with ample water, and a sunny exposure.

ASTER WILT

The wilt disease of Asters is caused by a parasitic fungus, which may attack the plant at any stage in its growth from the seedling to the seed-producing age. The spores may be carried on the seed, on implements used in preparing the soil and the soil itself. When once introduced into the soil, it persists indefinitely and makes the land "Aster sick."

A wilt-resistant strain of Asters is one which, although planted on the sick soil will withstand the attacks of the fungus and develop into strong, healthy plants, while the non-resistant strains may succumb.

Much disappointment on account of Aster Wilt has been overcome by the use of Wilt-Resistant strains.

Brief Cultural Notes

ZINNIAS: These are warm weather loving plants and should never be sown until the soil has thoroughly warmed up and all danger of any frost is past. For best results, especially with the smaller flowered, early blooming varieties, we recommend sowing the seed where the plants are to flower. The taller growing, large flowered sorts can safely be transplanted, although they also will make a more robust growth and will produce more flowers if they can be sown where the plants are to bloom, and then when the seedlings are 3 to 4 inches tall, thinned to the proper distance. To induce a thrifty, heavy root system, irrigate your plants rather than sprinkling. Dig a little trench alongside the row and let the water run slowly for quite a while so it will seep down deep into the ground and make the food in the soil available for the plant throughout the mass of feeding roots. Always cultivate after each irrigation to conserve moisture.

CHRYSANTHEMUMS: Gardeners are coming more and more to grow the early flowered sorts, which can now be had in all colors. Young Chrysanthemum plants bloom better than huge clumps, so divide the clumps of hardy Chrysanthemums each spring, setting small divisions in newly enriched spots in the garden. As the shoots grow 3 or 4 inches tall, pinch out the tops; this will cause them to branch freely. A tablespoonful or two of bone meal dug into the soil about the plants early in the spring will be beneficial. Watering the plants each week with manure water will produce a lusty growth and increase the size of the flowers. Generally Chrysanthemums are troubled with black, brown or purple plant lice, but if they are sprayed with nicotine extract, they will be kept in check and will not become bad pests if one is regular in the work and the spraying is not deferred too long. During the summer the plants need plenty of water and it is wise to syringe the leaves frequently in order to lessen the attacks of red spider, which is an almost microscopic insect, whose injury is evident from leaves turning whitish in appearance.

MORNING GLORIES: Never plant until the soil is thoroughly warm. If it is too cool the seeds will rot instead of germinating. To aid germination of particularly hard-seeded varieties, filing a notch at the top of the seed will help considerably. Select the driest, sandiest part of the garden and sow where the plants are to flower as the Morning Glories resent transplanting. Keep on the dry side; heavy watering induces foliage growth at the expense of flowers. A poor soil is preferable to a rich one.

Lily-of-the-Valley

Estate Lily

Lilium Regale—Royal Lily

The use of fertilizers with Lilies is most important. Well rotted sheep manure is best but should never be used in contact with the bulb. Bone meal as a top dressing is very necessary.

See page 41.

Stately Lilies are of the easiest culture, and the varieties listed below are all perfectly hardy. After once being planted, they will increase in beauty and size with each succeeding year. Lilies do best in a well drained sandy soil, which should be fairly rich, and the plants should be given plenty of water during periods of drought. In order to grow Lilies to large size, the bulbs should be planted deeply, 6 inches or more, and the soil stirred to double the depth of planting.

Standard Lilies

Henryi **Orange Speciosum Lily.** Of vigorous growth and will thrive in any soil. If planted in partial shade the rich orange coloring of the flowers will be highly accentuated. Cover 10 inches. Height 3 to 4 feet, although well established plants will go higher. Blooms July-August. Very prolific bloomer. **Each 35c; 3 for \$1.00.**

Umbellatum Orange-red blossoms in early July. Height 12 to 18 inches. Cover bulbs 5 to 6 inches deep. **Each 35c; 3 for \$1.00.**

Regale **Royal Lily.** A magnificent Lily; the pure white flowers, heavy with fragrance, and with canary-yellow throat, have an outside pink suffusion. Cover 8 inches. Height 3 to 5 feet. Blooms June, July. Large bulbs, 7 to 8 in. size, each 40c; 3 for \$1.10.

Tigrinum **Tiger Lily.** Single. The old popular Lily that should be in every garden. Orange-red, black spots. Cover 8 inches. Height 4 to 5 feet. Blooms August-September. **Each 35c; 3 for \$1.00; 6 for \$1.75.**

Estate Lily Just the kind we have been waiting for. The blossoms are very much like the popular Easter Lilies. Can be forced. **Each 50c; 3 for \$1.35.**

SUPERB EXHIBITION GLADIOLUS

MORE POPULAR THAN EVER—ALL POSTPAID

The Gladiolus are the most attractive and useful cut flower of all the summer flowering bulbs. The long, graceful spikes that carry fifteen to twenty buds may be cut soon as the first flower buds show color; then, if kept in water each successive bud will develop and thus prolong the blooming many days.

The planting season starts in April, and continues until in June, at intervals of two weeks; you thus have flowers from late July until frost time. Best results are obtained in a sunny position and placing the bulbs fully 6 inches deep. Water freely.

A very complete **Cultural Leaflet on Gladiolus** free with orders upon request. To eliminate aphid and thrip treat with Semesan, Lysol or Corrosive Sublimate, and store with Naphthalene Flakes.

Gladiolus bulbs are usually ready in March, and through April and May into June.

Our stock has all been treated once by the bulb grower before being shipped to us.

PERENNIAL HERBS IN YOUR GARDEN

**FOR FRAGRANCE
FOR BEAUTY
FOR FLAVOR**

Few people realize that the group of plants called HERBS have such a multiple purpose. Some have attractive blossoms that earn for them a place in any flower bed. Others, like the THYMES, are valuable for borders or bedding plants in the rock garden. COSTMARY and TARRAGON give a pleasing fragrance to the air about them, whether in the garden or home. Have you ever crushed the fresh leaves of LEMON MINT in your hands and had that pleasing aroma cling to them for hours? Have you a place for a neat 1 1/2-foot high hedge? Try SAGE. Many herbs do best in poor soil in full sun. Have you such a trouble spot in your yard? And in addition, every one of these herbs can either add zest to your salads, tantalizing flavor to drinks, hot or cold, and the magic touch that lifts soups, vegetable and meat dishes out of the category of common food.

In the fall before the first frosts you may pot a few specimen plants and move them to the kitchen window where you can enjoy the fragrance and flavor for months to come.

The HERBS listed here for spring shipment are healthy, field-grown, hardy perennial root stocks. They are grown in Colorado and are especially suited for high altitude gardens. Orders will be filled in April and early May. Since climatic conditions vary throughout the inter-mountain area the plants should receive protection until the danger of severe frosts is past. Most herbs, except the mints, do best in full sun, in dry, well drained soils.

If you live in, or plan a visit to Denver during May, you can add a score of other delightful herbs to your collection by a visit to THE COLORADO SEED COMPANY. These latter are tender perennials or annual herbs, potted growing plants that will not stand shipment. Call or write for list.

CHIVES. Grow 12 inches high with attractive flowers. Tops used in green salads like Onions. **Per clump 50c.**

COSTMARY. Tall growing, large leaf, shrub-like. For back-grounds. Very aromatic and sweet smelling. **Vigorous clump 45c.**

LOVAGE. Tall growing, upright, for background. Leaf imparts delicious Celery-like flavor to salads. **1-year roots 50c.**

CATNIP. A Mint of tall grey foliage. Cats love it. A good bee plant. **Per clump 50c.**

ENGLISH MINT. The common Mint with bright green foliage. Excellent for beverages and meat. **Per clump 45c.**

LEMON MINT. Excellent Lemon-Mint fragrance in crushed leaf. **Per clump 50c.**

SAGE. Low shrub with grey foliage and lavender flowers. Can be pruned yearly to form low hedge. Seasoning for meat. **Vigorous, 1-year roots 50c.**

TARRAGON. Medium height, narrow leaf, shrub-like growth. Aromatic. Excellent Anise fragrance and flavor. **Vigorous, 1-year roots 55c.**

KITCHEN THYME. Low, dark green, rounded and compact growing. Use as edging as well as specimen planting. Fragrant. Splendid for seasoning. **Good, 1-year plants 50c.**

LEMON THYME. Low growing, spreading, light green foliage. Fine for rock gardens. Lemon scented. **Good, 1-year plants 50c.**

SEEDS FOR EVERY LAWN REQUIREMENT

About Lawns A good lawn is, without doubt, one of the important features of the home grounds or of any landscape design. It should be remembered when considering a new lawn that the cost of the seed is only a very small part of the actual investment. The labor cost is the greatest. It is thus no economy to save a few cents by buying seed of a questionable quality, only to realize the added expense in years to come of repatching and doing the lawn over and over again. We take pleasure in recommending our grades of Kentucky Blue Grass, which are the best obtainable. For special purposes and certain locations we have made up mixtures which we feel very suitable. When you are in doubt about what seed is most suited for your particular purpose, please write us. Our leaflets give much information.

Seller gives no other or further warranty, express or implied."
